Power BI Dashboard Project

Tools Used

- Power BI
- Power Query
- DAX

PROJECT INTRODUCTION

Project Overview

This dashboard provides an interactive analysis of Amazon sales and operational performance. It helps identify sales trends, customer purchasing patterns, product performance, and shipping efficiency through dynamic visualizations.

Dataset Information

- Dataset: Amazon Sales Report
- Records: Approximately 1.2 Lakh+
- Domain: E-commerce
- Tool: Microsoft Power BI

Objectives

- Analyze overall sales performance.
- Identify top-performing products.
- Monitor order status and fulfillment.
- Compare regional sales.
- Generate actionable business insights.

Business Insights & Recommendations

Key Business Insights

- Sales reached **₹79 Million** from **120K orders**, indicating strong business volume.
- Average Order Value is approximately **₹653**, suggesting customers mostly purchase low-to-medium value products.
- The **"Set" category** contributes the highest sales by a significant margin.
- Amazon Fulfilled products contribute much more sales than Merchant Fulfilled products.
- Approximately **60%** of total orders are successfully shipped.
- Cancelled orders account for around **17K orders**.

Recommendations

- Focus on increasing Average Order Value through product bundles and cross-selling.
- Introduce premium product combinations and discounts above ₹1000 purchase value.
- Identify months with slight decline and run promotional campaigns during those periods.
- Maintain inventory levels and increase promotions for the Set category.
- Expand Amazon Fulfilled inventory for faster delivery and improved customer satisfaction.

Conclusion

The dashboard indicates healthy business performance with ₹79M in sales generated from 120K orders. Revenue is primarily driven by the Set category, medium product sizes, and Amazon Fulfilled orders. Future growth can be achieved by increasing Average Order Value, reducing cancellations, optimizing inventory, and promoting underperforming products.
